## **CPC Expands to Accommodate Sales Trajectory**

*Significant business growth fuels capacity addition*

**St. Paul, Minn. – March 8, 2022** – [CPC \(Colder Products Company\)](#), a leading manufacturer of connection technologies used in biopharmaceutical processing, medical, thermal management, and industrial applications, is adding to its footprint in Minneapolis-St. Paul. The development follows the recent opening of the company’s global headquarters in Roseville, Minn., which includes production operations and an additional nearby warehouse.

“The pace of our growth is due largely to our reputation in rapidly expanding markets like biopharmaceuticals, cell and gene therapy, and liquid cooling of electronics used in data centers and supercomputing applications,” said CPC President Janel Wittmayer. “Demand for our fluid management solutions has been growing substantially as these markets experience their own growth.”

CPC plans to occupy a 168,000-square-foot facility at 4200 Round Lake Rd. W. in Arden Hills, Minn., by fall 2022. The building will house new production, warehouse and office space for the more than 500 employees who will work there when it opens. The site adds to the company’s existing Roseville facilities and a cleanroom manufacturing operation in Minneapolis. CPC also doubled the size of its Roseville Class 7 cleanroom in December to accommodate increasing demands for products manufactured in a cleanroom environment, particularly from healthcare and biopharma customers.

CPC’s employee base has more than doubled since 2020. Today the company employs almost 1,200 people worldwide. CPC has operations in the United States, Germany and China, sales offices in 14 countries, and nearly 200 distributor partners around the globe.

###
